Performance Report

Clock Period: 5.6 ns

Power: 91.5630 mW

benchmark	Instructions-per-cycle	Instructions-per-second	Instructions-per-second-per-Watt
max_path_sum	0.734589	131.177	1432.638
gaussian	0.691919	123.557	1349.420
transpose	0.461893	82.481	900.810
quicksort	0.655126	116.987	1277.664
Geometric mean	0.6262	111.829	1221.331

Our Instructions-per-cycle was determined based on our performance counters.

Instructions-per-second was determined calculated as $(1 / \text{clock period}) * \text{IPC}$ for each test, and Instructions-per-second-per-Watt is the Instructions-per-second / Power (in Watts). The geometric mean was found by taking the fourth root of the product of each performance metrics.
